Brown Ear Cafe
Rehoboth Beach, DE

Pied Billed Grebe
Belted Kingfisher
Barn Swallow
12:00 - Depart for lunch
1:00 - Return for
further work
Brown Thrasher
Only slight song

During afternoon we looked at feeders (Hummingbirds, Goldfinch, Tufted Titmouse) saw Lake - much quiet around by shorebirds except.
Feeding birds seen
Blue Winged Teal (EP) 2-4
Belted Kingfisher
Barn Swallow (several)
Blue winged Warbler

2 Grey Kangaroos

~~12~~ 1 x 3 Ephemeroptera adults
copulating - copulated in flight Subimagos

No Sign of Night Parrot. Dudley Rackliffe feels sure that it was not a Nephelma that he saw in the past but a Night Parrot. It disturbs me that he has apparently never seen a Nephelma here - a species that must have been here — the past is to have used — but believes he has seen the Night Parrot.

However I — if course possible that he saw the Night Parrot. If so it is disturbing [illegible] the [illegible]

Interested - no stamps

various aspect
Museum work
with Michael
Note for discussion
with Gwen Dixon
need for junior
preparators &
carrying out working
work of prep. of
skins & skeletons etc
(birds & mammals)
Note also need for

learning in this as well as in working & other toxicology on living animals. Note also that these should be prepared in such that examiners should not be expected to do these on own but could take group preparation & do some themselves. would also give practical experience to all students for research preparation skills - put in mind others.

Check also role & limits practice

* Isolated trees (emergents) may project from the canopy of some communities (Richards, Tansley, and Watt, *Imp. For. Inst. Pap.* No. 19, 1939, 6). In some closed-forests, emergent *Araucaria*, *Acacia*, or *Eucalyptus* species may be so frequent that the resultant structural form may be classified better as an open forest.

† Some ecologists prefer to ignore scattered trees and shrubs, equivalent to emergents in a predominantly grassland, heath, or shrubland formation.

‡ A tree is defined as a woody plant more than 5 m tall, usually with a single stem. A shrub is a woody plant less than 8 m tall, frequently with many stems arising at or near the base (slightly modified from Beadle and Costin, *Proc. Linn. Soc. N.S.W.* 77, 1952, 61).

§ These formations are rare in Australia.

¶ Appropriate names for the community will depend on the nature of the dominant herb.

Formula*	Very Dense (*v.d.*) (< dia. canopy)	Dense (*d.*) (< twice dia. canopy)	Mid-dense (*m.d.*) (> twice dia. canopy)	Open (*o.*)
